Cognitive Automation

## THE APPNOMIC DIFFERENCE

Appnomic is in the business of providing Application Performance Management & Cognitive Automation Solutions to digital enterprises. Our Solutions are designed to help these enterprises in minimizing and preventing their business outages and prepare them for exponential growth by using machine learning and our patented Application Behavior Learning (ABL) techniques.

Our flagship product, **AppsOne** is an Application Performance and transaction insights tool, which uses Machine Learning and ABL to identify unique application usage patterns and issues and proactively raise alerts in case of anomalies before an outage occurs.

Our primary differentiator is the methodology we use to identify gaps based on machine data, allowing us to extract actionable insights from our cognitive engine. This self-learning technology platform is highly flexible and adaptive to application and business process level changes.

## UPSTREAM BENEFITS

-  Consistent quality with time savings and cost reductions
-  Integration of multiple systems through Machine Learning and Artificial Intelligence
-  Identification of business transaction failures and self-healing using cognitive automation
-  Reduced turnaround times and high quality outcomes
-  Technology and operations delivery alignment to achieve comprehensive business results
-  Compliance Assurance
